CSA1522-Cloud computing and big data analytics
Experiment-4

Aim: Create a simple cloud software application for Library book reservation system for SIMATS library using any Cloud Service Provider to demonstrate SaaS include the necessary fields such as Title of the book, author, publications, Year, edition, no of copies, Rack no, status (taken/returned) etc.

Procedure:

1. The SIMATS Cloud Library Book Reservation System is a simple cloud-based SaaS application developed to manage library books and reservations.
2. The system stores important book details such as title, author, publication, year, edition, number of copies, rack number, and book status.
3. Students can use the system to search for books, check availability, and reserve books online.
4. The librarian can add, update, and delete book details and manage reservations.
5. The system maintains the book status as Available, Taken, or Returned.
6. The application can be hosted on a Cloud Service Provider such as AWS.
7. The book and reservation data can be stored in a cloud database such as Amazon RDS with MySQL.
8. Students and librarians can access the application through a web browser without installing the software on their computers**.**
9. 9.Thus, the project demonstrates the Software as a Service (SaaS) cloud computing model for managing the SIMATS library

Input:

Name *
First Name Last Name

ID *

Date of birth
dd-MMM-yyyy

Occupation *
-Select-

Phone Number
+91 81234 56789

Email *

What would you use the library for? *
- Reference
- In-house reading
- Borrowing

Which sections of the library would you like access to?
- All
- Magazines
- Fiction
- Non-Fiction
- Electronic
- Research & Reference

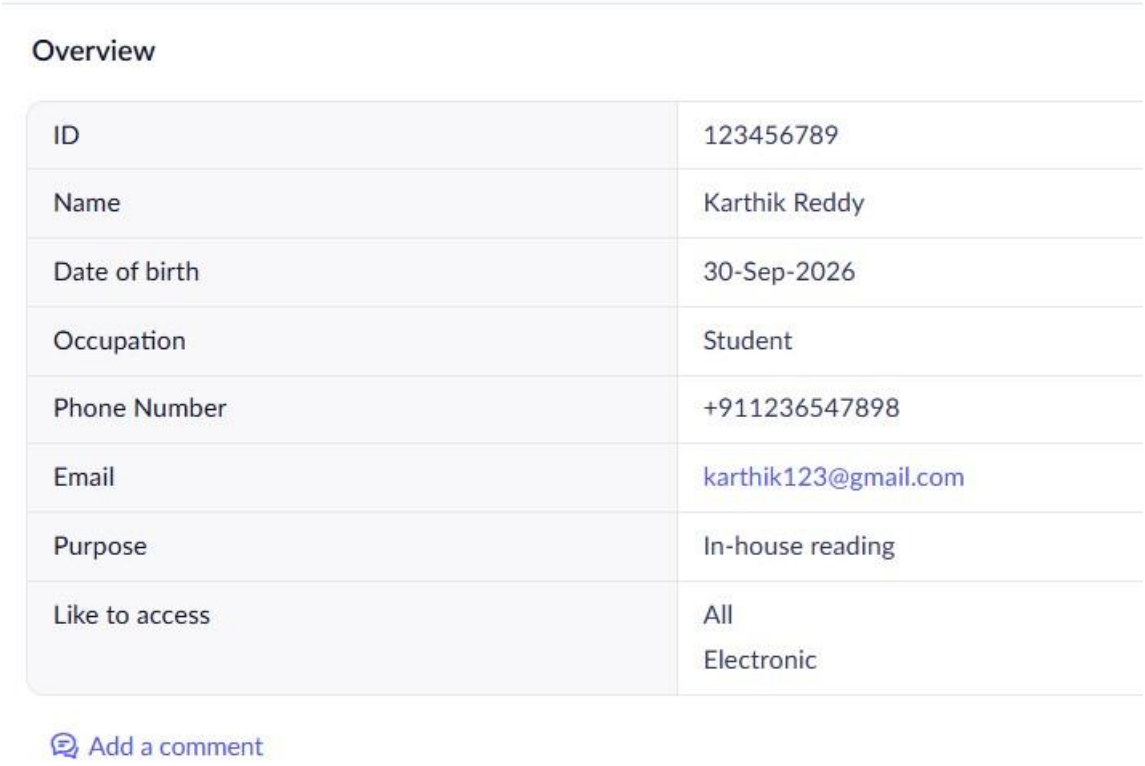

Declaration

- Accept responsibiltiy for the return of any borrowed item by the due date. *
- I am aware any items lost, defaced, damaged or not returned by me will incur a replacement cost. *
- I understand my borrowing rights will be suspended while any items remain overdue. *

Submit Reset
