CSA1522-Cloud Computing and Big Data Analytics

Experiment-5

Aim:

Create a simple cloud software application for Mark Sheet Processing System using any Cloud Service Provider to demonstrate SaaS include the necessary fields such as name of the student, Reg no of the student , Subjects , Marks, Average, percentage, rank, overall performance etc.

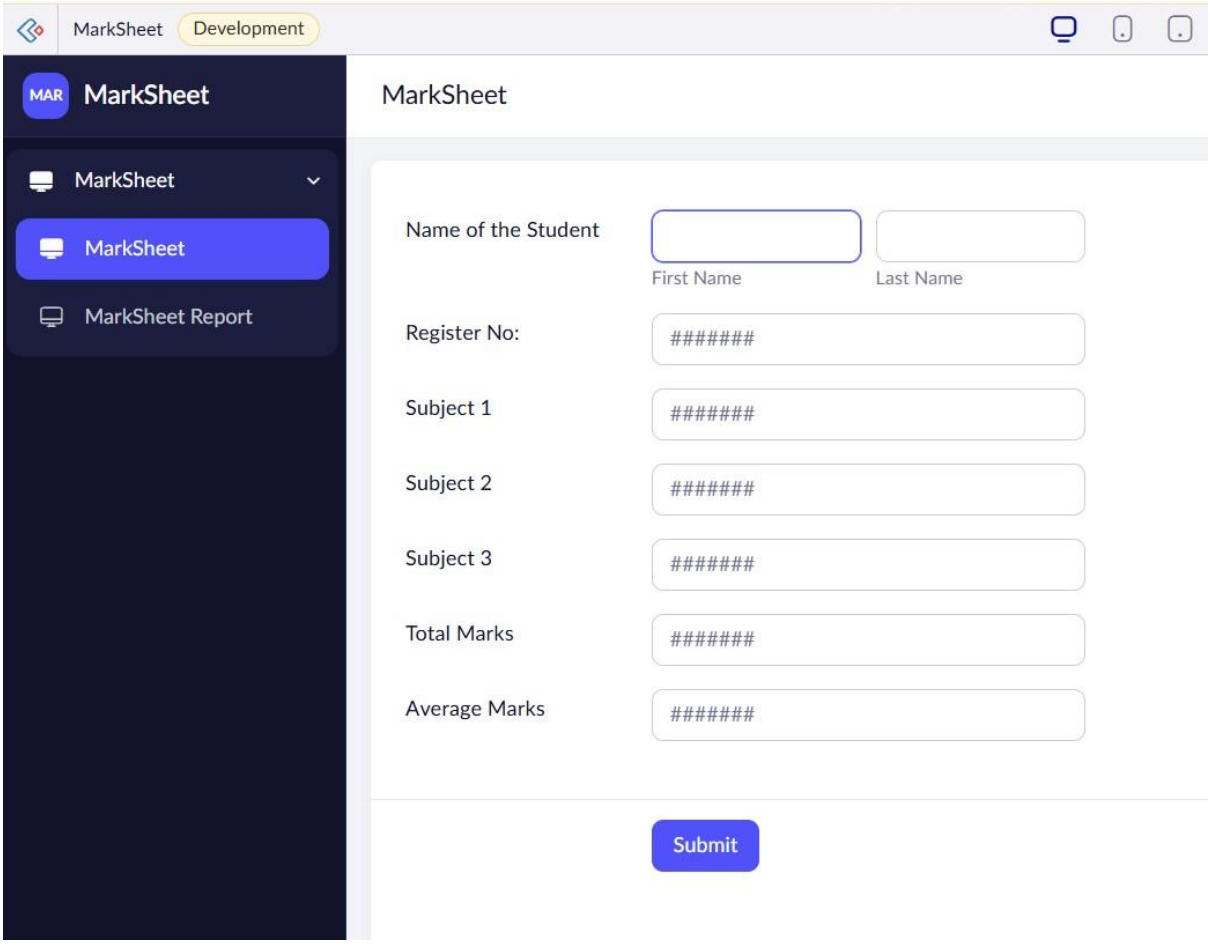

Procedure:

1. Open the Zoho Creator cloud platform and create a new application.
2. Create a Mark Sheet Processing System application.
3. Design a student details form with fields such as:
4. Student Name
5. Registration Number
6. Class / Section
7. Academic Year
8. Add subject-wise marks fields such as:
9. Mathematics
10. Physics
11. Chemistry
12. Computer Science
13. English
14. Configure the form to accept student details and marks from users.
15. Configure the application to calculate the Total Marks, Average, and Percentage automatically based on the entered marks.
16. Configure the application to determine Rank and Overall Performance based on the student's percentage and marks.
17. Create suitable reports/views to display student details, subject-wise marks, total marks, average, percentage, rank, and overall performance.

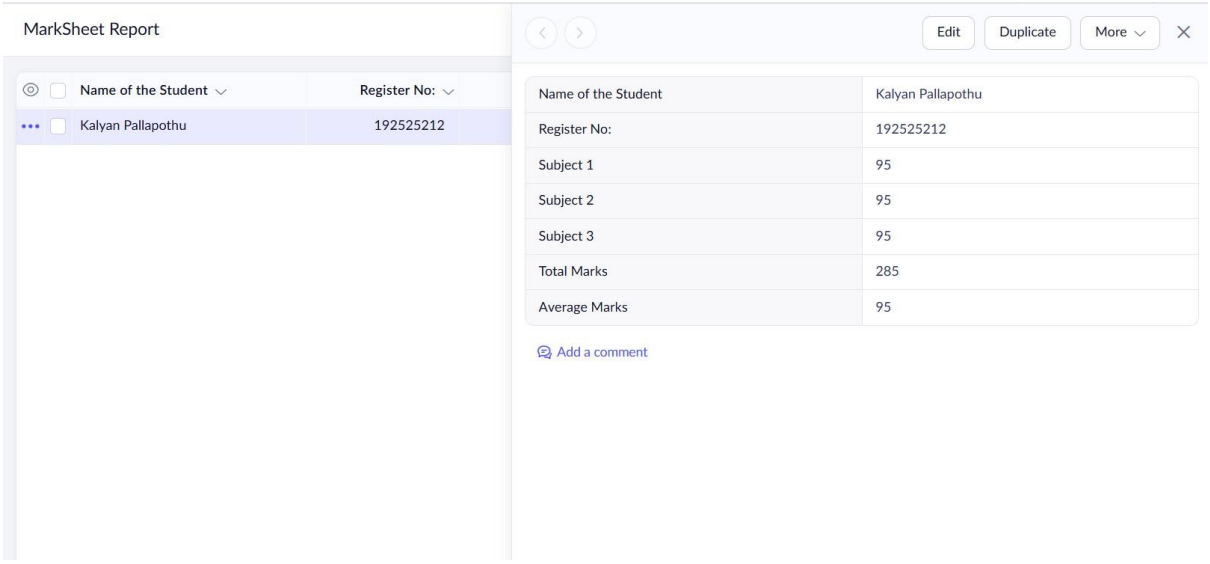

18. Test the application by entering different student details and marks and verify that all calculations and results are generated correctly.
19. Publish the application through Zoho Cloud so users can access the Mark Sheet Processing System through a web browser.
20. Demonstrate SaaS by allowing users to access and use the mark sheet application online without installing the software locally.

Implementation:

Input:

Output:

Result:

The Cloud-Based Mark Sheet Processing System was successfully created using Zoho Creator. The application accepts student details and subject-wise marks, and automatically calculates Total Marks, Average, Percentage, Rank, and Overall Performance. The application was tested with sample student data and successfully generated the required mark sheet.
