CSA1522-Cloud Computing and Big Data Analytics

Experiment-6

Aim:

Create a simple cloud software application for Payroll Processing System using any Cloud Service Provider to demonstrate SaaS include the necessary fields such as Name of the employee, experience in present org , over all experience, basic pay, HRA, DA, TA, net pay, gross pay etc.

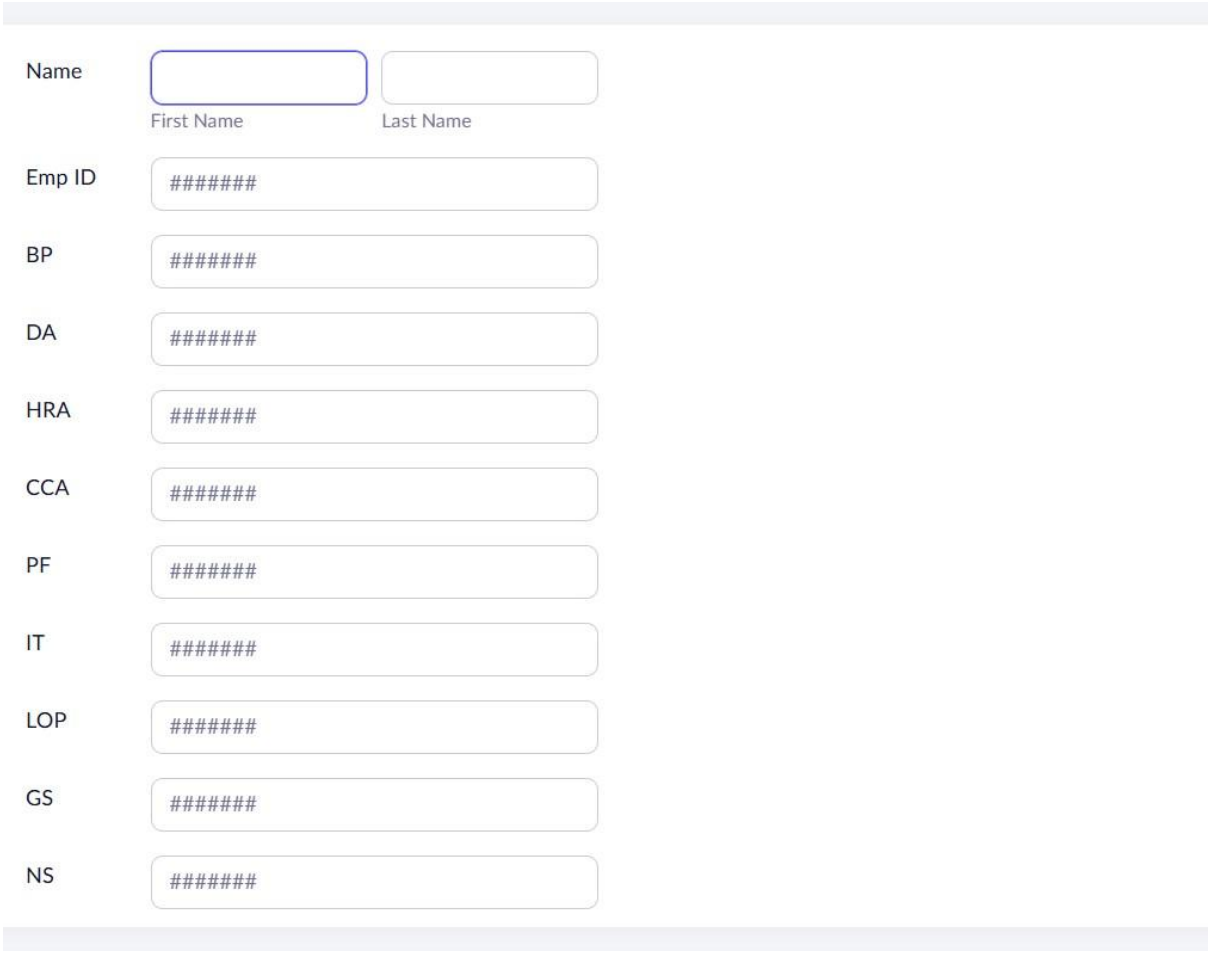

Procedure:

1. Open the **Zoho Creator** cloud platform and create a new application.
2. Create a new application named **Payroll Processing System**.
3. Create an **Employee Payroll Form** to collect employee and salary details.
4. Add the following employee details:
5. Employee Name
6. Employee ID
7. Department
8. Designation
9. Experience in Present Organization
10. Overall Experience
11. Add the following salary components:
12. Basic Pay
13. House Rent Allowance (HRA)
14. Dearness Allowance (DA)
15. Travel Allowance (TA)
16. Add the required deduction fields:
17. Provident Fund (PF)
18. Income Tax (IT)
19. Loss of Pay (LOP)

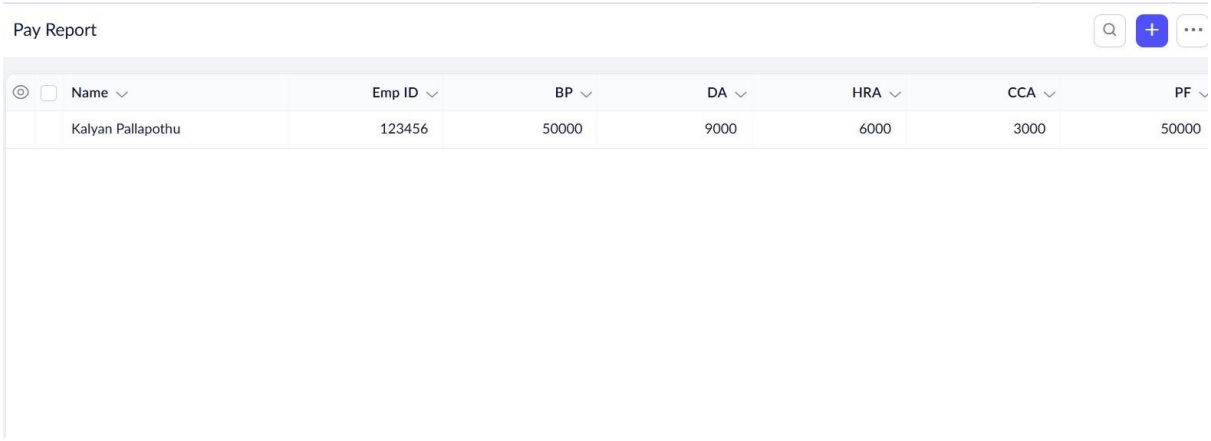

20. Other Deductions
21. Configure the application to automatically calculate the **Gross Pay** using the salary components.
22. **Gross Pay = Basic Pay + HRA + DA + TA**
23. Configure the application to automatically calculate the **Net Pay** after deducting the applicable deductions.
24. **Net Pay = Gross Pay − PF − IT − LOP − Other Deductions**
25. Create suitable **reports and views** to display employee details, salary components, deductions, Gross Pay, and Net Pay.
26. Test the application by entering different employee details and salary values and verify the calculated payroll information.
27. Publish the application through **Zoho Cloud** so that users can access the Payroll Processing System through a web browser.
28. Demonstrate the **SaaS model** by allowing users to access and use the payroll application online without installing the software locally.

Implementation:

Input:

Output:

Result:

The Cloud-Based Payroll Processing System was successfully created using Zoho Creator. The application stores employee and salary details in the cloud and automatically calculates Gross Pay and Net Pay based on the entered salary components and deductions. The system was successfully tested with sample employee data and the required payroll reports were generated. The application was published through Zoho Cloud and successfully demonstrated as a Software as a Service (SaaS) application.
