CSA1507-Cloud Computing and Big Data Analytics

Experiment-9

Aim:

Create a simple cloud software application for Flight Reservation System using any Cloud Service Provider to demonstrate SaaS. Include the necessary fields such as search for flights, from, to, travel date, passenger details, travel class, and fare details.

Procedure:

1. Open the Zoho Creator cloud platform and create a new application.
2. Create a Flight Reservation System application.
3. Design a booking form with fields such as:

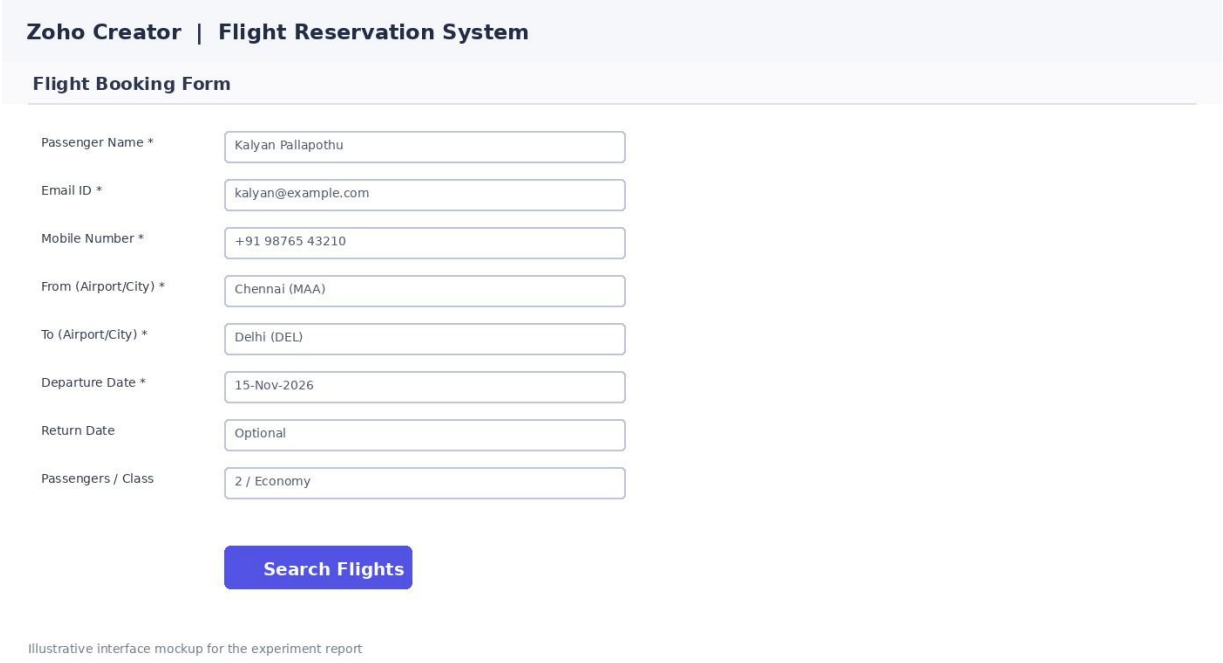

- From (Source Airport/City)
- To (Destination Airport/City)
- Search for Flights
- Departure / Return Date
- Number of Passengers
- Travel Class
- Passenger Details

4. Add flight details such as Airline, Flight Number, Availability, Departure/Arrival Time, andFare.
5. Configure the form to accept reservation details from users.
6. Create suitable reports/views to display available flights and booking information.
7. Configure the application to calculate or display booking and fare details.
8. Test the application by entering different source, destination, date, passenger, and class details.

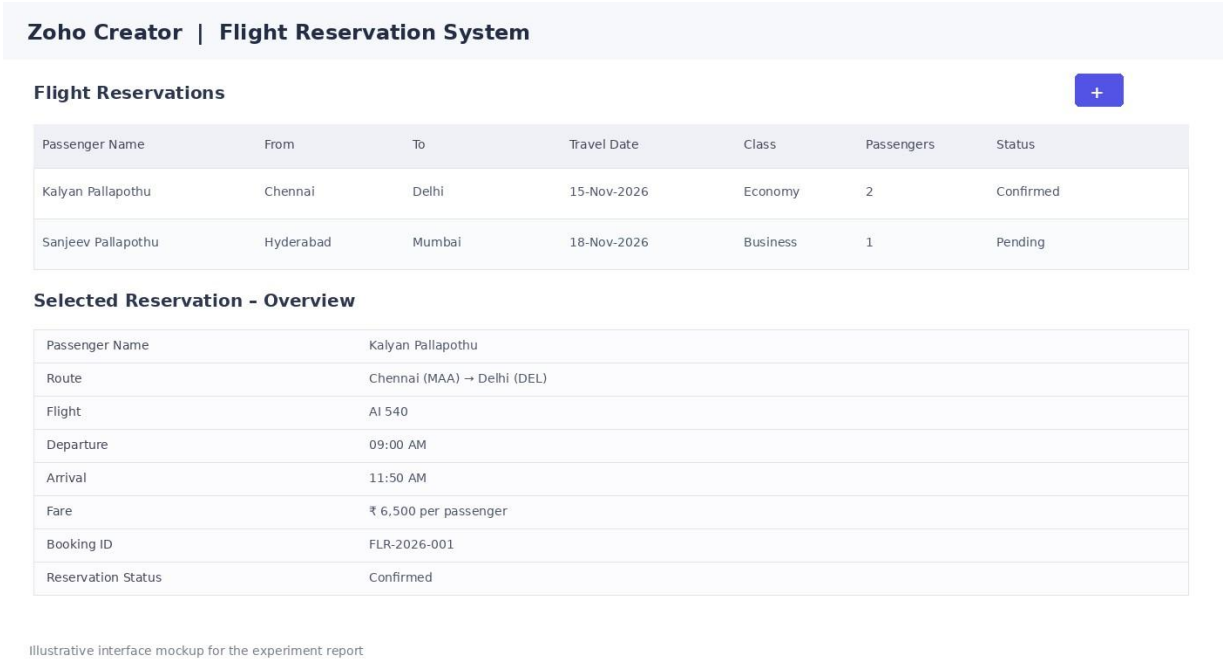

9. Publish the application through Zoho Creator so users can access it through a web browser.
10. Demonstrate SaaS by allowing users to use the flight reservation application online withoutinstalling the software locally.

Implementation

Input:

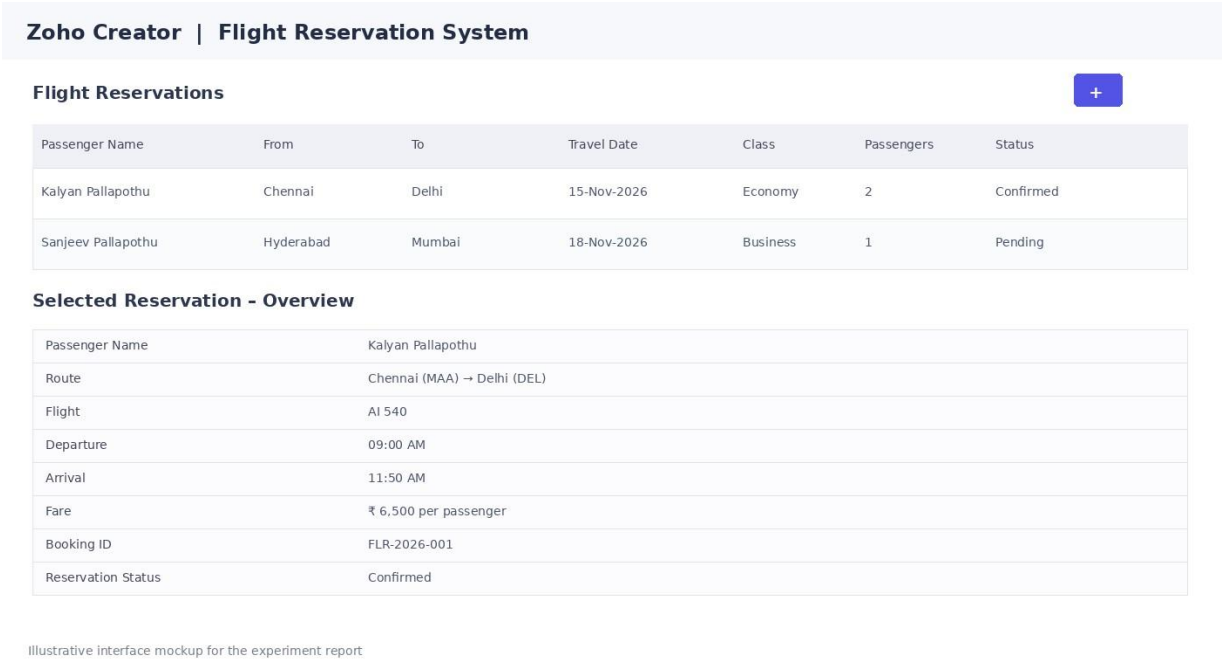

Illustrative interface mockup for the experiment report

Illustrative interface mockup for the experiment report

Output:

The application displays matching flight records with airline name, flight number, source, destination, departure and arrival times, seat availability, fare, booking ID, and reservation status.

Illustrative interface mockup for the experiment report

Result:

The Flight Reservation System form and report design were adapted for Zoho Creator as a cloud-based SaaS application. Users can enter flight and passenger details and view reservation information through a web browser without installing software locally. The displayed screenshots are illustrative mockups; actual deployment and testing should be confirmed after implementing the application in Zoho Creator.
