CSA1522-Cloud computing and big data analytics
Experiment-7

Aim: Create a simple cloud software application for Students Attendance System using any Cloud Service Provider to demonstrate SaaS include the necessary fields such as name of the students, course, present , Absent, course attendance, OD request, grade, attendance percentage, etc.

Procedure:

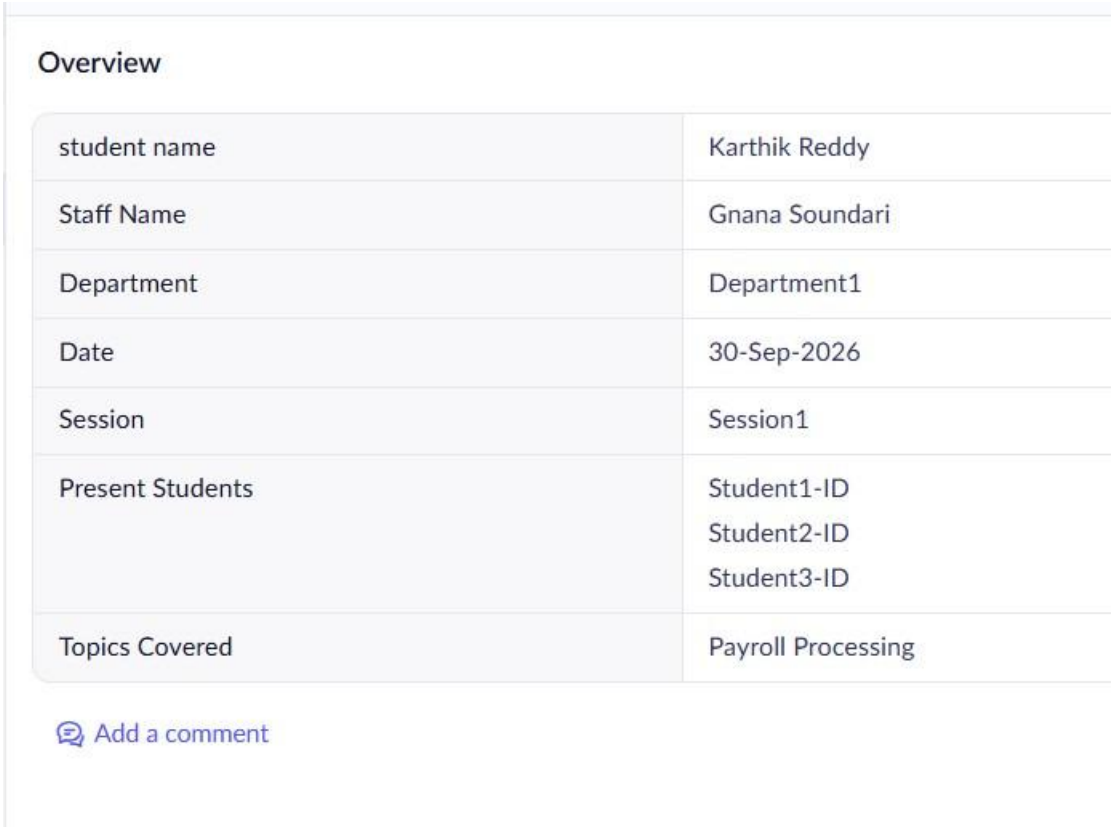

1. Create the project named Cloud-Based Student Attendance System to manage student attendance using a SaaS model.
2. Select a Cloud Service Provider, such as AWS, to host the application and store student attendance data.
3. Create a cloud database using a service such as Amazon RDS with MySQL.
4. Create a Student table with fields such as Student ID, Student Name, Course, Semester, and Grade.
5. Create an Attendance table with fields such as Student ID, Course, Date, Present, Absent, OD Request, and Attendance Percentage.
6. Develop a web application that allows students and faculty to access the attendance system through a web browser.
7. Add student details such as name, course, semester, and grade to the system.
8. Record daily attendance by marking each student as Present or Absent for the respective course.
9. Provide an OD Request option where students can submit their On-Duty requests for approval.
10. Calculate the attendance percentage automatically based on the number of classes attended and the total number of classes.

Input:

Output:

student name	Staff Name	Department	Date	Session	Topics Covered
Lucky Reddy	Gnana Soundari	Department2	29-Sep-2026	Session2	Payroll Processing
Karthik Reddy	Gnana Soundari	Department1	30-Sep-2026	Session1	Payroll Processing

Result:

The Cloud-Based Student Attendance System was successfully developed and deployed as a SaaS application. The system allows faculty to record Present and Absent status, manage OD requests, and maintain student details such as name, course, grade, and attendance percentage.
