CSA1522-Cloud computing and big data analytics
Experiment-8

Aim: Create a simple cloud web application for student counselling system using any Cloud Service Provider to demonstrate SaaS with the fields of student name, age, address, phone, subjects studied, Year of passing, percentage of marks, domain interest, etc.

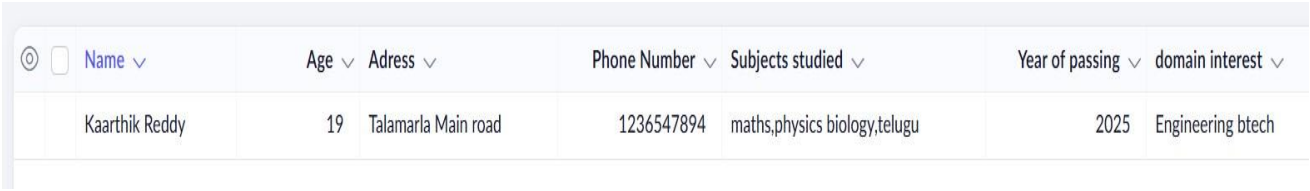

Procedure:

1. Choose a Cloud Service Provider such as AWS, Google Cloud, or Microsoft Azure.
2. Create a simple web application for the Student Counselling System.
3. Create a student database to store counselling information.
4. Add student details such as Name, Age, Address, and Phone Number.
5. Enter academic details such as Subjects Studied, Year of Passing, and Percentage of Marks.
6. Add counselling details such as Domain Interest and Career Interest.
7. Create a web form to enter and update student information.
8. Store the student records securely in the cloud database.
9. Display student details to the counsellor through a web interface.
10. Deploy and test the application on the cloud so it can be accessed online.

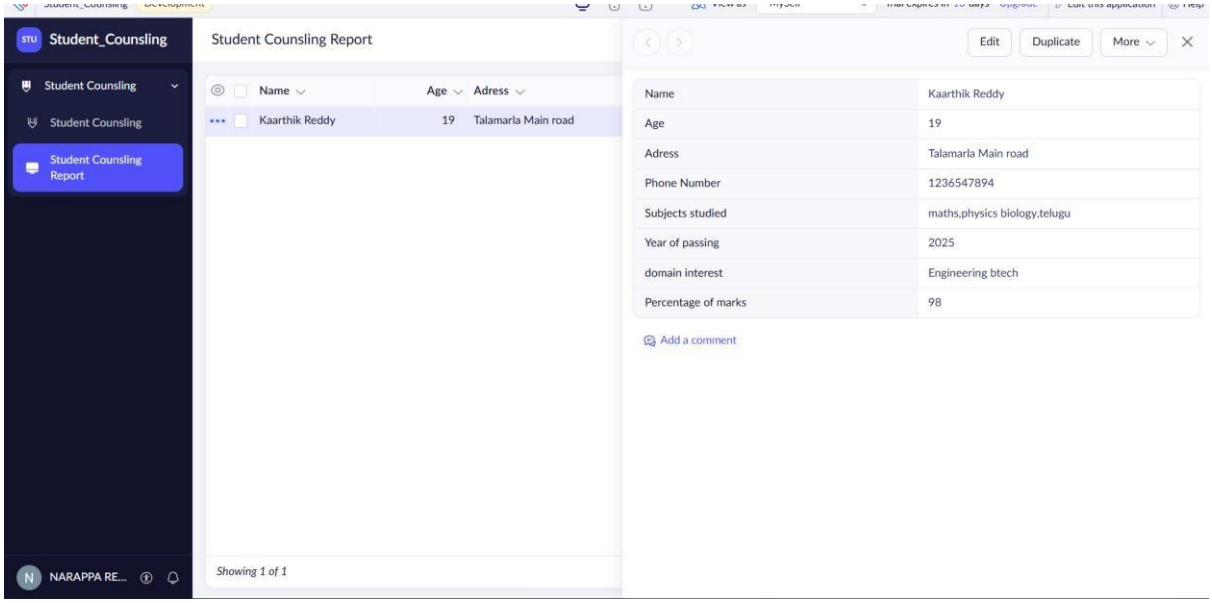

Input:

Output:

Name	Age	Adress	Phone Number	Subjects studied	Year of passing	domain interest
Kaarthik Reddy	19	Talamarla Main road	1236547894	maths,physics biology,telugu	2025	Engineering btech

Result:

The Student Counselling System was successfully developed as a simple cloudbased SaaS application. It stores student details such as name, age, address, phone number, subjects studied, year of passing, percentage, and domain interest. The system allows counsellors to access and manage student information online through the cloud.
