CSA1522-Cloud computing and big data analytics
Experiment-9

Aim: Create a simple cloud software application for Hospital information system for SIMATS Hospital using any Cloud Service Provider to demonstrate SaaS with fields of patient name, age, address, phone, email, Attender name, attender phone, doctor name, diseases, etc.

Procedure:

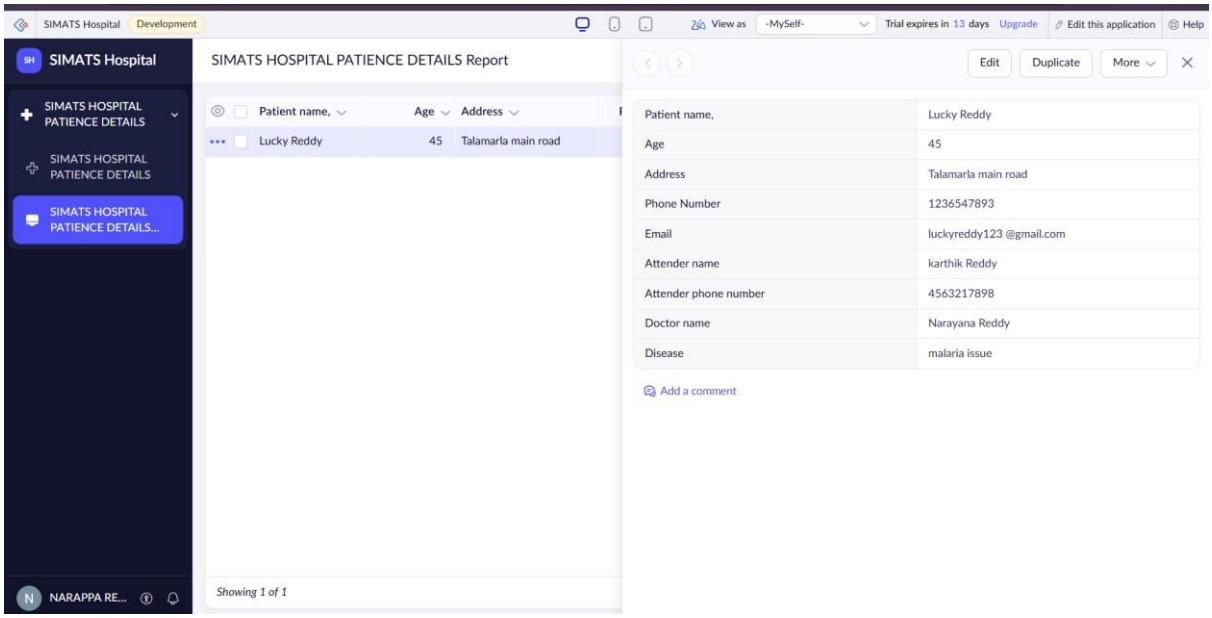

1. Choose a Cloud Service Provider such as AWS, Google Cloud, or Microsoft Azure.
2. Create a cloud-based Hospital Information System for SIMATS Hospital.
3. Create a patient database to store patient information.
4. Add patient details such as Name, Age, Address, Phone, and Email.
5. Add attender details such as Attender Name and Attender Phone.
6. Add medical details such as Doctor Name, Disease, and Treatment details.
7. Create a web form for entering and updating patient information.
8. Store the patient records securely in the cloud database.
9. Display patient information to authorized hospital staff through the web application.
10. Deploy and test the application on the cloud for online access.

Input:

Output:

Patient name,	Age	Address	Phone Number	Email	Attender name	Attender phone number
Lucky Reddy	45	Talamarla main road	1236547893	luckyreddy123 @gmail.com	karthik Reddy	4563217898

Result:

The Hospital Information System was successfully developed as a simple cloudbased SaaS application for SIMATS Hospital. The system stores and manages patient, attender, doctor, and disease details in a cloud database. Authorized hospital staff can access and manage the information through a web browser.
