CSA1522-Cloud computing and big data analytics
Experiment-11

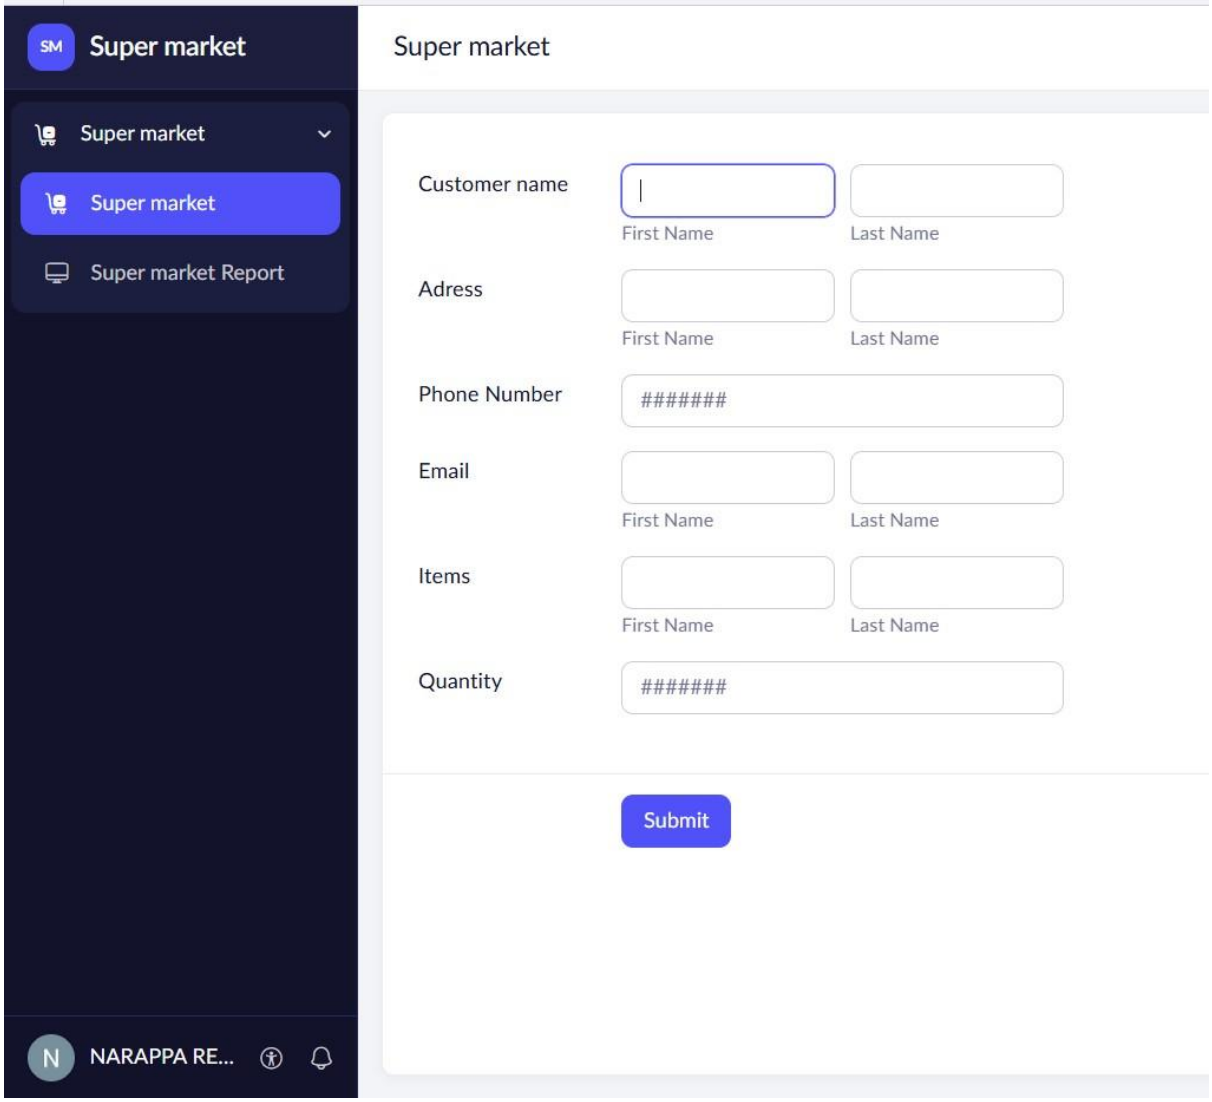

Aim: Create a simple cloud software application for online super market using any Cloud Service Provider to demonstrate SaaS with the template of customer name, address, phone, email, items, quantity etc. with the item classification form.

Procedure:

1. Select a cloud service provider such as Google Cloud, AWS, Microsoft Azure, or an online cloud development platform.
2. Create an account and access the cloud-based application development environment.
3. Create a new project named Online Supermarket Application.
4. Design a customer information form containing Customer Name, Address, Phone Number and Email.
5. Create an Item Classification Form to classify products into categories such as Grocery, Fruits, Vegetables, Beverages and Household Items.
6. Add fields for Item Name, Item Category, Quantity and Price.
7. Implement the application so that customers can enter their details and select the required supermarket items.
8. Add a calculation module to calculate the total quantity and total purchase amount.
9. Deploy and run the application on the cloud platform and verify the customer and order information.

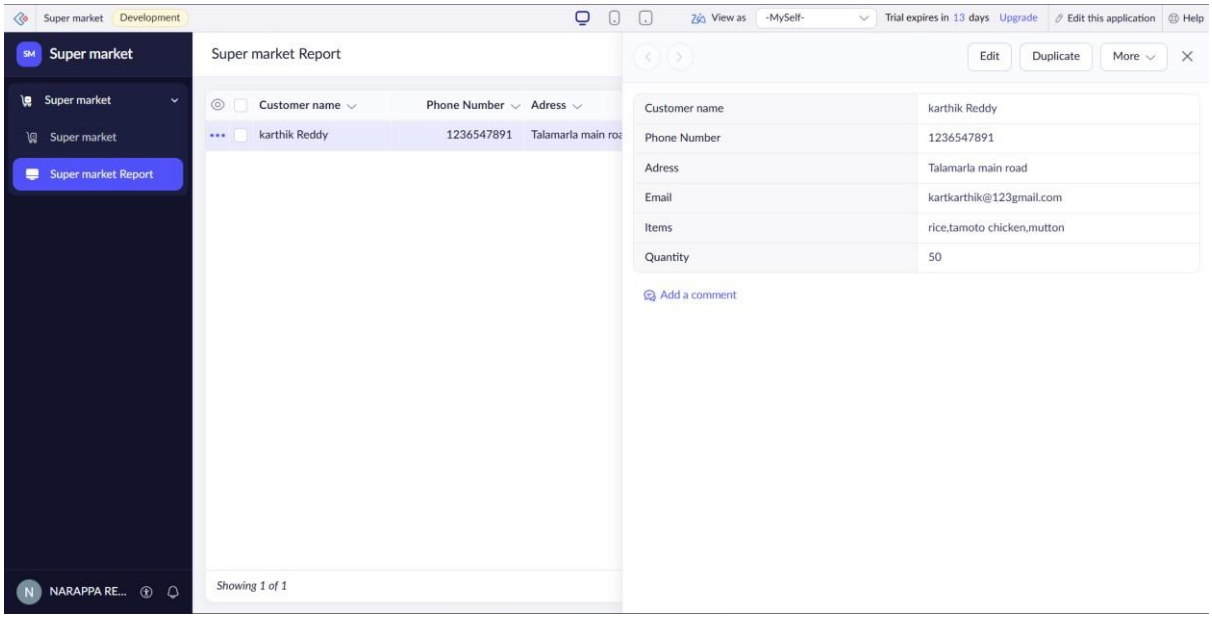

10. Access the application through a web browser to demonstrate SaaS, where users can use the supermarket software without managing the underlying cloud infrastructure.

Input:

Output:

Customer name	Phone Number	Adress	Email	Items	Quantity
karthik Reddy	1236547891	Talamarla main road	kartkarthik@123gmail.com	rice,tamoto chicken,mutton	50

Result:

Thus, a simple cloud-based Online Supermarket application was successfully created and deployed using a Cloud Service Provider. The application provides customer details, item classification, item name, quantity and purchase information. The application can be accessed through a web browser, thereby successfully demonstrating the Software as a Service (SaaS) model of Cloud Computing.
